

**Integrated Vertical Transport &
Lifting Solution In Pakistan.**

Pakistan Elevator

Introduction

Pakistan Elevator has been safely and efficiently moving people and cargo since 2004.

(Pakistan Elevator is part of CST Group, the group working since 1976),

Today we are Pakistan's largest service provider in the field of import and installation of many branded elevators, escalators, and moving walks.

We are manufacturing Elevator Cabs, Doors, Edges and many others spare parts in Pakistan.

Also work for elevators control System on "Programmable Logic Controller" (PLC) And "Remote Elevator Monitoring" (REM),

You can find us anywhere in Pakistan. To insure a quality service, our customer care center at Saima trade towers in Karachi is open 24/7. We are round the clock available there with maintenance/repair team for keep moving your elevators continuously.

Testimonial

SEO's Message

I am very much thankful to all concerned people who help to make PAKISTAN ELEVATOR a history of responsible business conduct.

I strongly believe that real business success is not profits, measured in currency. The success is in a growing list of customers who show trust after astute analysts about our ability and skill of our workforce.

From the three and a half decades, we have been dealing in business of Transport, Road Safety Equipments, Vehicles Tracking, and import/installation of Elevators, Escalators, and Moving Walks in Pakistan.

As machinery user, we are committed to minimize our impact on H.S.E around us.

Sincerely

Senior Executive Officer

Suleman Mandra

PAKITAN ELEVATOR (CST Group)

Our Products & Services

1- Import of many brand of elevator from all over world.

We keep our 3 offices outside Pakistan with Export and shipping License with name of, CARGO TOUCH

2- Installations of our import and other party's elevators

We keep experts team for Installation of elevators in high-rise buildings, they did lot of job in UAE, and done fresh job with Kone in Makkah Clock Tower, opposite KABATULLH, Kingdom of Saudi Arabia.

3- Electrical parts of elevators.

We provide Elevator control panels, Programmable Logic Controller (PLC), And on Microprocessors, with help of our company, T Zone Digital Technology.

URS Certification

Also we provide every year inspection and run test report of our own manufactured parts, and our complete imported elevator also installation job.

7- Warranty

We provide three year warranty of our own manufactured parts and imported elevator. Maintenance and parts will be 100% free of cost.

About Elevators

Elevators were invented for luxury, but today they are going to be heart of high-rise buildings and used as a necessity because of the comfort and convenience they provide. Taking the elevator is a faster and a more useful alternative over the stairs. Another advantage of these elevators is that they can carry people, animals, goods, heavy luggage, etc., which takes both time and effort to be transported through stairs. Elevators are used in residential and commercial buildings, hospitals, malls, restaurants and construction sites Etc.

Traction Elevators

Traction Elevators, they function with the help of a rope that passes over a wheel. This wheel is attached to an electric motor and when the motor is powered, the wheel is set in motion, pulling the rope and in turn lifting the elevator car to the desired floors.

Geared Traction:

These have a gearbox attached to the powered electric motor. This increases the speed, making the elevator move faster than others.

Geared Less Traction:

These do not have a gearbox, but the wheel is directly attached to the motor.

Machine Room Less:

Elevators: Usually a machine room is needed to accommodate the motor and the wheel, but these do not possess it. They have the motor and the wheel placed directly over the elevator shaft as it is more convenient to access in case of repairs, and you don't have to dedicate an entire room to it.

Hydraulic Elevators:

This type of elevator has a slightly slower mechanism, which includes a piston placed at the bottom of the elevator.

Conventional:

This type includes a sheave or a pulley that extends further below the elevator pit, and this provides support to the elevator while it is descending.

Hole Less Hydraulic:

The hydraulic elevators usually have a hole below the pit for faster movement, but these types don't possess it because their piston is on, either side of the car.

Hydraulic Roped:

These include the piston as well as a rope on a wheel to move the elevator.

Pakistan Elevator is a part of CST Group, the Group of companies network, registration and memberships.
